Notes:

1. The Maximum User Payload includes:
 - a. the conventional load (this is the allowance for passengers)
 - b. essential habitation equipment (items and fluids required for safe and proper functioning of habitation equipment)
 - c. optional equipment (items available from the manufacturer over and above the standard specification)
 - d. personal effects (those items not covered by the above)
2. The Mass in Running Order is the mass of the unladen vehicle including a 75kg allowance for the driver plus engine coolants and 90% of the fuel tank capacity and 1 x 6kg Calor Lite LPG cylinder.
3. The MRO is calculated with the fresh water tank empty. If you travel with water in the fresh water tank then the payload will reduce accordingly.
4. Please take care to ensure that you have allowed for the masses of all items you intend to carry in the motorhome, e.g. passengers, optional equipment, essential habitation equipment and personal effects, such as clothing, food, pets, bicycles, sailboards, sports equipment etc.
5. Warning - under no circumstances should the maximum technical permissible laden mass of the motorhome be exceeded.
6. Caution - When fitting a tow bar, it must meet certain minimum requirements as specified by Type Approval Regulations. The bar will have marked on it the approval standard (94/20/EC or 56R ECE) and the maximum download, or nose weight, that it can accept. It must fit the manufacturer's approved mounting points and must not obscure the towing vehicle's number plate.
7. Note - the additional weight of the tow bar and trailer nose weight increases the rear axle loading of the motorhome so care should be taken that the rear axle load is not exceeded when towing.
8. To ensure adequate road holding, the load on the front axle, under all conditions must not be less than 40% or more than 70% of the total weight. Care must be taken when distributing loads. The loadings above are maximum loadings and must not be exceeded under any circumstances.

The maximum trailer weight is limited by the gross train weight which must not be exceeded. For example, if the vehicle has an automatic gear box and is at the maximum MTPLM of 3700kg, then the maximum trailer weight possible is 1800kg. Reducing the weight of the vehicle by removing payload, will allow you to increase the trailer weight up to a maximum of 2000kg.
